SAT by MBA

Destined to Succeed.

Our Intensive SAT Program Focuses on the Salient Aspect of the Test

We teach strategies not just doing exercises!

In the “SAT by MBA” program, students will be taught a three-pronged approach to answering test questions. This format is “strategy-execution-accuracy.” Our preparation will clarify the expectations of the SAT and will emphasize the need to anticipate rather than agonize over what is being tested. Time will be spent consolidating knowledge and skills developed from pre-school to high school. This SAT exam tests students’ ability to view information and issues from varying perspectives.

- **Reading Comprehension** - Students will read and think critically about passages and understand the types of questions on the test and how to answer them. All answers are presented for a particular reason. Rather than “guess,” we will develop a “filtering” system to eliminate incorrect answers.
- **Writing & Language** - Students will understand what topics are tested. The students will use critical thinking to decipher the “correct” use of grammar as defined by the College Board. You don’t have to be a grammarian to do well in this area.
- **Math** - Students will learn how a handful of fundamental principles can be used to solve many seemingly difficult SAT math problems. Students will practice several logical techniques for finding the correct solutions without solving the problem directly.

Tutors will use formative and summative assessments. Tutors will break the test down and help students analyze each section. The SAT is not a mysterious test once you are academically prepared and understand what you are expected to know. You should come to each class prepared! We look forward to helping you to excel on this important examination!

Remember:

READ CAREFULLY - THINK CRITICALLY!
